

Gemba360: Risk Management Module

A key requirement of the work health and safety legislation is for the employer to systematically manage risks arising from workplace hazards. There must also be effective consultation and communication with the workers involved about these risks and how they are to be managed.

Gemba360 Risk Management Module has been developed to assist the your agency manage and mitigate all incidents, hazards and near misses.

There are five steps in the system used to manage work health and safety risks at the University:

1. identify hazards and hazardous jobs
2. assign priority for each hazard and hazardous job
3. assess the risk to find out exactly what makes it hazardous
4. control the risk(s) or fix the problem(s)
5. evaluate periodically to check that work health and safety risks are being effectively managed.
